

## Detail

Hello – These notes sound choppy because I didn't write them as a letter. Quick orientation, attached *Substantiation...pdf* document page 12. Summary:

- 1) FEMA claims the science attached to email 1/2 as an authority when we want to tell someone what to do,<sup>1</sup> but then shields it as draft, preliminary, or superseded when someone wants to hold us accountable.<sup>2</sup>
- 2) Our censorship of this unclassified risk information caused additional loss of life in 2017 and 2020,<sup>3,4</sup> and it endangers the public today.<sup>5</sup>

## Pandemic and general

Most of the pandemic discussion is in the attached *Substantiation...pdf* document. Its focus is the same as it was for the partial disclosure that I made in July:

Pandemics have been the #1 or #2 (after drugs) non-CBRN risk on DHS's list since 2011. The SNS was empty and the Nation was unprepared because we suppressed those risk assessments. We are still doing so.

with additional parts about 2017 (p. 14; context, section *Maria* below) and general issues (pp. 12-13 and 16-18) to support the broader disclosure. The 2 + 2 = 5 issue described on pp. 17-18 is especially relevant [that section won't make sense if it's the first thing you look at: I'm pointing it out for its relevance, not as a recommended starting point].

## Clarification in advance

The problem that I am disclosing is not that the agency stopped using this risk assessment, or replaced it with something else (I'm mentioning this because it is probably the first thing they will tell you). FEMA has every right to do that, if it wanted to. The problem is that it hasn't actually done so (*Substantiation...pdf* pp. 17-18). Instead, the agency represents that it has or has not in different contexts, depending on what is most advantageous for it to be true at a given moment (pp. 9, 15).

## Maria

FEMA had all the information needed to count Maria's deaths in 2017. Not in real time, not after the fact, but before they happened. But nobody knew that.

The Maria retrospective mortality projection chart added to page 14 (*Substantiation...pdf*) is the second of a pair from a February 2020 FOIA letter, also attached.<sup>6</sup> The first chart of the pair is on page 2 of *SNRA follow-up letter 20201016.pdf*.

FIGURE 2: SNRA 2015 POWER LOSS MORTALITY MODEL. RETROSPECTIVELY PROJECTED FATALITIES IN PUERTO RICO, BASED ON THE INFORMATION AVAILABLE TO FEMA IN OCTOBER 2017

- This chart ([Substantiation...pdf](#) page 14 figure 2, reproduced above) shows what the 2015 SNRA's power loss mortality model<sup>7</sup> would have projected with the information available to FEMA on October 14, 2017. Including the 47 then-known direct fatalities not depicted on the chart, the model's low and high projections are respectively 515 and 2,970 excess fatalities by March 2, 2018, when the chart ends.

Relevance to disclosure: In October 2017 I looked through the unclassified documentation attached to email 1/2 to see whether there was anything potentially useful for the ongoing response (attached [FOIA appeal 2017-FEFO-00165 20171101.pdf](#) p. 12) that would justify challenging its internal and external censorship more forcefully, or negating it directly by public disclosure as I'm doing now. At the time, the majority of Maria's preventable deaths were in the future.

I didn't find anything that appeared to me to be likely enough to make a difference to risk being disruptive in this way. Without a specific danger to the public that I could see myself, I couldn't articulate how the censorship was harmful. Since pushing harder to prevent theoretical harms seemed irresponsible when there was a real disaster going on, I continued the quiet FOIA route instead.

Two years later I discovered that this model had accurately predicted Maria's deaths, and that the responsible choice was the opposite of the one I made in 2017.

<sup>7</sup> [Strategic National Risk Assessment \(SNRA\) 2015 - Consolidated unclassified documentation.pdf](#) pp. 197-198, 201, 204-205. ## Justification for lawful disclosure

### 1) Future risks

These problems have done a lot of harm. The harms that they have done in the past evidence the harms that they would cause in the future, if they continued.

### 2) Process failure

FEMA claims the science attached to email 1/2 as an authority when we want to tell someone what to do,<sup>8</sup> but then shields it as draft, pre-decisional, or superseded when someone wants to hold us accountable.<sup>9</sup> We deny FEMA's state<sup>10</sup> and local<sup>11</sup> partners the data they need to protect their people,<sup>12</sup> and blame our failures on their ignorance of the information that we censored.<sup>13</sup> We mislead our leaders,<sup>14</sup> defraud Congress,<sup>15</sup> lie in court,<sup>16</sup> abuse FOIA,<sup>17</sup> and censor this unclassified science inside FEMA itself<sup>18</sup> to protect these contradictions.

Many of these harms and abuses have happened because of mistakes that I made myself relating to FEMA's interpretation and use of this risk assessment since 2015.<sup>19</sup> But I can't correct them while it remains invisible.<sup>20</sup> FEMA won't let them be corrected: they are too advantageous.

There are many lawful means of correction that are available to me, other than unilateral public disclosure. I've tried almost all of them. They all failed.<sup>21</sup> In each case, the agency easily countered it by abusing our monopoly of information – over the facts of the problem, and over the thing being censored itself. No matter how absurd, inconsistent, or incoherent our stories are, we get away with them because people believe FEMA.

I can fight an agency that lies in court and gets caught, or corrects itself when the falsehood is pointed out internally. I can't fight an agency that lies in court, and wins because of it.<sup>22</sup> Neither can anyone else.

I am disclosing the unclassified risk assessment attached to email 1/2 for these reasons, and the others described above.

## Notes

1. The SNRA is still effectively locked up inside as well as outside FEMA. For me, the main obstacle to socializing it now is a pair of [valid] non-disclosure agreements which my unsuccessful attempts to fix these problems inside the system left me with. Although the who/what/why details [the protected content] of the FEMA-internal wrongdoing which is keeping this information locked up aren't essential context for someone on the outside to use it now, they are for someone inside FEMA, and I can't communicate that.<sup>23, 24</sup>
2. A shorter version (*Detail (brief).pdf*) of this document which focuses more on context than justification is attached ~~at the top of the email, either this email or (for those of you who are getting this version at the top) the email attached to this one. For the former, this document is attached as supplemental content in the zipfile (Supporting files and context.zip / Other /~~ *Detail (full).pdf*  
*Detail (brief).pdf*.
3. Additional notes that didn't fit anywhere else, or which are recent additions that are too long to include in a brief letter, are in the document *Additional notes.doc* in the attached zipfile.
4. I am not speaking for my Department or Component, any past or present DHS organization, or any past or present colleagues. I will forward these letters to my chain of command, DHS, and DHS/FEMA next (unless that's you, in which case I've already done so).

Everything is unclassified, and non-security sensitive.

The unredacted information that these letters, attachments, and links communicate is explicitly within the scope of 5 U.S.C. § 2302, and communicated solely for its lawful purposes.

Thank you,

Andrew Janca

<sup>23</sup> These have the whistleblowing exceptions, and I've used them for exceptional situations. It's the routine communications that are essential for everyday work that they complicate to the point of being prohibitive.

<sup>24</sup> I have experienced no retaliation. This is one thing that often goes wrong in whistleblowing situations that, in my own experience, DHS, FEMA, and my management – in my entire time at DHS and DHS/FEMA – have done an absolutely outstanding job at doing everything right. I'm pointing this out here because it sounds like that's what I'm referring to, and it isn't.
