Filesizes may differ on different computers.

### Documentation

These are filesize-optimized PDFs, with vector-image replicas of the original raster figures and other internal optimizations that preserve the exact appearance of the original file when printed.<sup>1</sup> The purpose was to get the files small enough to email to whistleblower resources with size-constrained inboxes.

The one difference from these documents' original printed appearance are the draft labels, which I removed. DHS told Congress that the SNRA was done seven years ago.<sup>2</sup> The original draft-labeled June/July 2015 electronic versions of these documents are at [https://5usc2302.github.io/risk/Full documentation/Original versions/](https://5usc2302.github.io/risk/Full%20documentation/Original%20versions/).

<sup>14</sup> This was originally in front of the June 2015 draft SNRA Findings document. I removed it with the draft marks.

<sup>15</sup> Extension of the 1980-2014 historical incident data set used for the 2015 SNRA's combustible-flammable rail cargo accident chapter (SNRA consolidated documentation pp. 54-55 & 269-78, or [equivalent] SNRA 2015 Technical Appendix pp. 161-71) to the 1958-2014 timeframe, to capture a broader range of consequences of fatal U.S. accidents conditional on accident occurrence. This 2015-16 work was done by FEMA National Integration Center (NIC) after the SNRA update project finished, but got locked up in the same limbo as the main SNRA documentation which it was made to supplement. This document includes this study's core data, checked and updated to 2023 (see document footnote 2).
